

Project Requirements

- Interns must submit the abstract within two days of starting the project.
- If the trainer approves the project topic, the interns must submit DFD, Tables, and ER diagram (which will vary depending on the technology).
- The trainer must evaluate the project once a week.
- There must be at least three modules while designing the project.
- The project must have an admin to control all types of users.
- Design an intuitive and user-friendly interface for the application.
- Apply responsive design principles to ensure the application looks good on various devices and screen sizes.
- Use CSS frameworks like Bootstrap, Material-UI, or Tailwind CSS for styling, or implement custom CSS styles.
- Integration (Connecting Backend with Frontend): Use Axios or Fetch API to make HTTP requests from the frontend to the backend API
- Ensure seamless communication between the front-end and back-end for fetching and manipulating data.
- Authentication: Implement user authentication to allow users to sign up, log in, and log out. Ensure that only authenticated users can perform CRUD operations on data. Use JWT (JSON Web Tokens) for authentication and secure storage of user credentials (it will vary depending on the technology).
- Webforms and APIs must be validated.
- All functionalities of the project should be working.

Project Deliverables:

- Source code for both front-end and back-end components of the application.
- Documentation outlining the project architecture, API endpoints, and instructions for running the application locally.
- Presentation or demo showcasing the key features and functionality of the application.
- Must deliver the project report

Project Timeline:

- Planning and Design [Project Topic, DFD, ER Diagram, Table Structure]: 1 week
- Development of both the front-end and back-end: 2 weeks
- Deployment and Finalization: 1 week
- Total time for the project: 4 weeks

NB: The project must be submitted on time without any fail
